SUMMARY

Computer Science student and Backend-focused Software Developer with hands-on experience building scalable services using Go, NestJS, PostgreSQL, and Redis. Experienced in DDD, modular architecture, performance optimization, and containerized deployment.

EDUCATION

- Ho Chi Minh City Open University** Ho Chi Minh City, Vietnam
Bachelor of Science in Computer Science *Aug 2023 – Present*
 - Awarded academic scholarship for 2 consecutive semesters
 - TOEIC Listening & Reading: 945/990 *ETS, 2026*
 - DevOps For Fresher Certification *DevOps Edu, 2026*

PROJECTS

- Quiz System** [Frontend](#) | [Backend](#) *Aug 2025 – Aug 2026*
 - Designed a modular monolith backend with DDD layering across 18 feature modules, each with an isolated database schema and ports-and-adapters repository pattern.
 - Optimized a leaderboard query at 100k rows by adding a B-tree index, switching PostgreSQL from Parallel Seq Scan to Index Scan and reducing median latency from 17.8ms to 0.10ms (184x).
 - Benchmarked cursor vs. offset pagination at 100k rows; cursor pagination stayed at 0.04ms while OFFSET 50k reached 8.4ms, a 214x difference at deep pages.
 - Built a 4-stage production Dockerfile (base/prereqs/builder/runner) compiling native modules against the runner's glibc, cutting image size from 1.22GB to 522MB (57% reduction) versus a single-stage build.
- Personal Portfolio & Blog Platform** [Live](#) | [GitHub](#) *Aug 2025 – Feb 2026*
 - Architected a bilingual (EN/VI) portfolio and MDX blog with Next.js 16 App Router, statically generating 22+ locale-aware routes with typed dictionaries, metadata, and locale negotiation.
 - Built a resilient contact pipeline with Server Actions, Zod validation, honeypot protection, and Redis-based rate limiting, with parallel email delivery and fail-open handling.
 - Built an end-to-end SEO pipeline with dynamic metadata, per-locale sitemaps, RSS, hreflang, JSON-LD structured data, and dynamically generated Open Graph images for blog content.
 - Enforced performance budgets with Lighthouse CI on every PR, achieving 0.99–1.00 Performance scores, 0.8s LCP, 0–0.004 CLS, and 0ms TBT across measured production routes.
- Vietnamese Fake News Detector** [GitHub](#) *Sep 2025 – Feb 2026*
 - Built and evaluated four Vietnamese fake-news classifiers on 13,958 cleaned articles, with PhoBERT achieving 90.1% accuracy and 0.899 macro-F1.
 - Implemented a reproducible ML pipeline with VnCoreNLP, stratified splitting, cross-validation, leakage verification, McNemar testing, and TF-IDF ablation studies.

SKILLS

- **Languages:** JavaScript, TypeScript, Go, Python
- **Frontend:** React, Next.js, Tailwind CSS, App Router
- **Backend:** Node.js, NestJS, Express, Gin, REST APIs
- **Databases:** PostgreSQL, MySQL, Redis, Drizzle ORM
- **Architecture:** Modular Monolith, DDD, Ports & Adapters, Repository Pattern
- **DevOps:** Docker, GitHub Actions, Linux
- **Engineering:** OpenAPI, BullMQ, Pino, CI/CD
